

Select & Pay Terminal

Payment Solutions

- Removing obstacles to drive extra sales
- Supporting unattended car wash centres
- No cash handling by wash centre attendants

Installing self-service payment options for your carwash, jet wash and other forecourt equipment can help you hold on to potential customers who would have been unwilling to wait in line to pay in the forecourt shop.

Self-service payment terminals are modular and can be built to meet your specific requirements. They are available in three editions: Codax Pay @ Wash is optimised for sites with a single carwash; Codax Select & Pay is designed as a complete payment solution for centres with multiple wash and valet units; and Codax Card Kiosk is an in-store solution for vending carwash smartcards.

All Codax self-pay options can work with your existing installations. The units are reliable, rugged and secure.

Codax™ Codes and Cash

The Codax Codes and Cash unit provides the simplest way for you to add cash payments alongside your Codax installation.

When used with a jet wash, it allows customers to enter their prepaid Codax code and then top up as often as necessary with coins. Customers can also drive direct to the unit and make full payment with coins. For jet wash installations the visual display unit provides a clear time countdown and emits a tone that encourages users to top-up before their time runs out.

The unit can be installed alongside jet or gantry wash installations and configured to allow customers to select wash programmes or buy – time. The unit can also incorporate an optional Codax Smartcard reader.

Codax™ Carwash Kiosk

The Codax Carwash Kiosk is designed to sell carwash and other forecourt services to customers as they shop within your store.

It vends Codax carwash smartcards which can be used and topped-up again and again.

The Codax Carwash Kiosk's simple design and flexible payment options encourage your customers to take advantage of multi-buy carwash offers.

It can also vend jet wash, vacuum and other forecourt services.

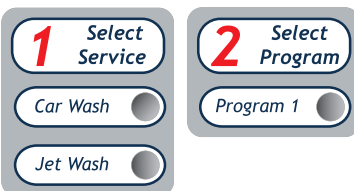

Sited in a prominent in-store position, these units really are the fastest and easiest way of serving and rewarding your regular carwash customers.

Fully flexible functionality

Because every customer and every carwash installation is different, we have designed our self-pay units to offer complete flexibility in the features and functionality they provide.

Selecting services and wash programs

Depending on the number of different services that you offer, and how simple you want the system to be for your customers, you can choose from two different approaches to program selection:

- Dedicated buttons for each service with additional buttons to select a specific program.
- A numerical keypad on which customers enter your code for each program – like the snack vending machines that people are already familiar with.

Coin acceptance

Change dispensing

Banknote reader

Credit and debit cards acceptance

Connect to card services provider over your existing network (LAN) or an in-built mobile data connection (GPRS)

Smartcard acceptance for multibuy and loyalty

Printer for sales receipts, card payment receipts and Codax code access tickets.

Voice instructions for user assistance

Pedestal or wall mounted

Out-of-hours security shutter

Codax™ Pay @ Wash

The Codax Pay @ Wash option provides a simple interface to your carwash or jet wash equipment.

This compact and easy-to-use terminal is installed right next to the carwash. It

includes the simple and familiar Codax keypad, which customers can use to enter a Codax access code, bought from your shop. It also has everything that customers need to drive-up, select a wash programme and pay with their credit or debit card.

You can also incorporate the Codax Smart Card system into these units, so they work seamlessly with promotions, loyalty schemes and fleet/account cards.

Codax™ Select & Pay

Codax Select & Pay is the perfect choice for wash centres and busy forecourts.

Select & Pay terminals are easy-to-use kiosks that allow customers to select their chosen wash program (and other car care services) and pay with cards or cash.

The terminal prints a ticket with a unique Codax access code, which the customer keys-in at the wash bay to start the machine.

You may choose to install these units at central points around your site or – to maximise convenience and minimise queuing – you can place one on the approach to each wash bay.

You can also incorporate the Codax Smart Card system into these units, so they work seamlessly with promotions, loyalty schemes and fleet/account cards.

Payment solutions in-use

Codax Pay @ Wash and Select & Pay machines are installed in many different configurations on forecourts and at wash centres around the World.

Here are illustrations of how they are working at some of them:

This wash centre has two carwash bays plus jet wash and vacuum cleaner, all controlled by the Codax code access system. Customers can pay in the forecourt shop or at the Select & Pay terminal (1). Either way, they are given the familiar Codax ticket with its simple code (2). To avoid unnecessary queuing, the Codax access code allows them to use either of the wash bays (3). Multiple services can be bought in a single transaction, so customers find it easy to pay for the vacuum cleaner (4) at the same time as their carwash or jet wash (5).

All Codax equipment is designed for ease of use. With this unit, customers can drive right up and make their selection without leaving their vehicle.

This Pay @ Wash terminal is positioned so customers can make their selection and pay while they are waiting in line at the car wash.

Your payment solution

Codax payment solutions are customised to meet the specific needs of each of our clients. We also have an ongoing research and development programme, so the design and colours of machines supplied may not match those seen here. Please note that in some territories the acceptance of bank cards is unavailable or limited in scope.

Your Codax reseller will be happy to provide you with more information. To find an authorised reseller, please contact us.
