THE NEW LEADER IN CAR WASH...
IS THE OLD LEADER IN CAR WASH

GoBD CERTIFIED

Integrating Codax™
POS and retail networks

Linking the Codax™ system to your retail network and POS provides **accurate sales data** for the retailer and head office, as well as opening **more opportunities** for staff to sell carwashes and valet services.

The Codax system can be integrated simply and securely to almost any retail network or POS system. Once you have connected the Codax Code Generator to your in-store network, you can simply add your carwash programmes and other valet services to the touch-screen menus on your Point of Sale system.

With this tight integration you can be sure that every time your carwash, jet wash or other forecourt service is used, it has been authorised through your retail network and all the details will be reported in full in your regular sales data.

It really is the simplest and quickest way to sell Codax codes, top-up Codax smartcards and manage profitable forecourt services.

POS Integration
Increase sales, improve reporting and maximise security

How it works

The Codax Code Generator is a networked device which gives your Point of Sales systems (POS) the ability to authorise and print out secure Codax codes for car wash programmes and similar services.

Almost all POS systems have the ability to communicate with the Codax Code Generator, so they can request wash codes on-demand. Our developers have created driver software which makes it straight forward for your POS supplier to update your touch screen menus with car wash programmes, jet wash minutes and other valet services.

The familiar Codax access code is printed out by your POS system, together with any promotional messages or instructions for the customer. Alternatively, for those customers who want to top-up a Codax smartcard, your staff just place the contactless card on the Codax unit while the value is uploaded.

Integrating sales with fuel dispenser and point of sale.

You can also sell car washes from elsewhere on-site.

Use any till to sell single-use codes and prepay smartcards.

Car washes are included in your regular sales and data analysis.

The Codax Code Generator connects to tills via serial or Ethernet network.

Sales Reporting

Because all your car wash, jet wash and other valet services are sold through your POS system, all of these high-margin items are included in your regular sales figures.

Within your POS system, car wash and valet services can be grouped and categorised just like any other product. This means you can easily add them into your different management and category reports.

Security

Codax Code Generator will only issue an access code or top-up a smartcard when the POS system reports a completed sale. This makes it almost impossible for a car wash or other valet service to be given away without the proper payment.

The unit itself is connected only to your retail network and the individual Codax controllers on your forecourt. It also has a number of physical and software features to protect it against unauthorised access.
